100 kHz to 6.0 GHz

# Multi-Band Multi-System Multi-Channel

## Cut Costs for New Wireless Tests

### Dual Waveform Memory

One RF output supports two waveform memories!  
Combine wanted and interference signals in baseband  
and output at one RF.

### Dual RF

One unit supports two RF outputs!  
Ideal for Multi-band, MIMO and MSR  
evaluations.

### RF Modulation Bandwidth: 160 MHz\*/120 MHz

Can generate and output signals for 160-MHz  
bandwidth max. wireless LAN (IEEE 802.11ac) and for  
120-MHz bandwidth.

The MG3710E is a vector signal generator with 6-GHz upper frequency limit and 160-MHz\*/120-MHz wide RF modulation baseband generator. It outputs various radio systems signals for cellular communications, such as 5G, LTE FDD/TDD, W-CDMA, GSM as well as narrowband communications, such as WLAN, Bluetooth and GPS.

### Cuts Equipment Costs

The dual waveform memory cuts equipment costs for tests, such as ACS, Blocking and IM, which require two modulation signal sources. The dual RF cuts MIMO equipment costs and reduces workloads for phase synchronization between equipment. It is important for tests using separate signals, such as MSR and multi-band.

### Improves Yield

The high quality signal generator ACLR and SSB phase noise reduces the effect on wideband and narrow-band measurements to improve test margins and yields.

-68 dBc @W-CDMA, TestModel1, 64DPCH, 2 GHz  
<-140 dBc/Hz (nom.) @100 MHz, 20 kHz offset, CW

### Cuts Tact Time

The List/Sweep mode switches the frequency and level faster than 600  $\mu$ s. Moreover, the 4-GB waveform memory upgrade can load many waveform patterns while instantaneous switching eliminates time wasted reloading waveform patterns.

\*: Supports firmware version 2.00.00 and later. Can generate 160-MHz bandwidth signals (Wireless LAN IEEE 802.11ac) only when using WLAN IQproducer MX370111A and 802.11ac (160 MHz) option MX370111A-002. The latest version can be downloaded from the Anritsu homepage. <<https://my.anritsu.com/home>>

- 1024 Msamples [Option 046/076]

### Arbitrary Waveform Generation

ASCII IQ sample data created using general-purpose signal generation software (such as MATLAB) can be converted to waveform patterns for the MG3710E. Data produced during R&D simulations can be converted using IQproducer.

## Expandability

### BER Test Function [Option 021]

This option measures BER using Data/Clock/Enable demodulated at the DUT to display the results on the MG3710E screen.

Input bit rate: 100 bps to 40 Mbps

### Analog/Pulse Modulation Functions [Standard]

Supports built-in analog modulation (AM/FM/ΦM) functions and pulse modulation (PM) functions.

Adding additional analog modulation input options (Option 050/080) supports modulation by external signal input.

### AWGN Generator [Option 049/079]

This options generates AWGN internally for the required waveform.

Absolute CN Ratio: ≤40 dB

### USB Power Sensors [Sold separately]

Up to two USB power sensors can be connected to the MG3710E and the results are displayed on the MG3710E screen.

- Frequency Range: 50 MHz to 6 GHz [MA24106A]
- 10 MHz to 18 GHz [MA24118A]
- 10 MHz to 26 GHz [MA24126A] etc.

### Local Signal I/O for MIMO Signal Source [Option 017]

Local signals, baseband clocks and trigger signals can be shared between up to four MG3710E units to output phase coherency signals with synchronized signal output timing for configuring even 8×8 MIMO systems.

## Key Features

### Operability

#### Simple Touch-panel Operation

Touching the easy-to-use GUI with hierarchical menus fetches related function and numeric input keys for simple fast settings.

#### Signal Flowcharts with Signal Block Diagrams

Two intuitive Hardware Block Chart and ARB Info screens make it easy to grasp settings, data and signal paths at a glance.

#### Frequency Channel Table

A built-in channel table with presettings for popular communications systems simplifies frequency settings by using channel numbers.

### Connections with External Equipment

#### Remote Control Interfaces

GPIO, Ethernet (1000BASE-T), and USB (Type B) interfaces on the rear panel offer versatile choices for operation by remote control.

#### USB Connections

Two Type A USB2.0 connectors on each of the front and rear panels offer convenient connections for keyboard, mouse and USB memory.

#### Analog IQ Input/Output [Option 018]

This option installs analog IQ input and output connectors on the front and rear panels, respectively.

Input: I Input, Q Input

Output: I Output,  $\bar{I}$  Output, Q Output,  $\bar{Q}$  Output,

#### Trigger Input

Start and Frame trigger connectors are built-in in as standard for outputting waveform patterns synchronized with externally input trigger signals.

#### Marker Output Editing

##### Marker 1 output [Standard]

##### Marker 2 and 3 output [Requires AUX Conversion Adapter J1539A]

This standard function outputs trigger signals at specific positions in the waveform pattern (Frame header, Burst header, etc.) for synchronizing and measuring signal generator waveform patterns with external equipment. Preset markers can be set at both the pre-installed waveform patterns and waveforms generated using IQproducer and any set markers can be output with the MG3710E marker editing function.

### Security

The standard OS in MG3710E is Windows 10.

#### User Data Storage on 2ndary HDD [Option 011]

This option is useful for saving sensitive waveform pattern data, etc., used at evaluation that cannot be allowed to leave the laboratory, workplace, factory, etc. The 2ndary HDD can be removed from/installed in the rear-panel slot when wanting to keep this saved data secure when the MG3710E is sent for service, used by third parties, etc.

### Pre-installed Key Waveform Patterns

#### Waveform Patterns [Pre-installed]

Waveform patterns for the world's main communications systems (below) are pre-installed in the MG3710E for license-free use.

- LTE FDD (E-TM1.1 to E-TM3.3)
- LTE TDD (E-TM1.1 to E-TM3.3)

# Dual RF & Dual Waveform Memory

## Dual VSG: Two RF Outputs

The MG3710E supports two RF outputs (1stRF/2ndRF) max. in one unit. Moreover, different frequencies can be set independently at 1stRF and 2ndRF.

Not only different frequencies but also different levels and waveform patterns can be set independently at each SG while each is tracking the other. This is convenient in the R&D phase for evaluating interference between two different systems using different frequency bands.

Notes: Supported frequency bands cannot be changed after shipment.  
IQ input is supported only by SG1 (1stRF) and requires Option 017.

- 2ndRF**  
Frequency Range:  
2ndRF 100 kHz to 2.7 GHz [Option 062]  
2ndRF 100 kHz to 4.0 GHz [Option 064]  
2ndRF 100 kHz to 6.0 GHz [Option 066]  
\* Whether or not install and the frequency model can be selected at any time.
- 1stRF**  
Frequency Range:  
1stRF 100 kHz to 2.7 GHz [Option 032]  
1stRF 100 kHz to 4.0 GHz [Option 034]  
1stRF 100 kHz to 6.0 GHz [Option 036]  
\* Must install any one of these.

## Dual Waveform Memory: Four Waveform Outputs Max.

In the standard configuration, one VSG (1stRF or 2ndRF) has one waveform memory. However, adding the baseband signal combine option (Option 048/078) upgrades to two memories for one VSG. In other words, models with two VSGs (1stRF and 2ndRF) installed can have a maximum of four waveform memories. Two waveform patterns can be set easily on-screen for one VSG, each with different frequency offset, level offset and delay time settings to output a combined baseband RF signal. With this setup, one MG3710E supports the following test environment — a setup that previously required two expensive signal generators:

- Wanted Signal + Interference Signal
- Wanted Signal + Delayed Signal

### Synthesizing Signals with Different Sampling Rates

#### ~ Rate Matching Function ~

When signals with different sampling rates are set in memory A and memory B, a synthesized signal maintaining each of the different sampling rates can be output. This is useful when synthesizing signals for standards with different rates, such as multi-standard signals.

However, depending on the combination of waveform sampling rates, sometimes it may not be possible to match rates due to internal operation clock limitations. The Mismatch warning dialog is displayed in this case.

- Waveform Pattern B**

Delayed Signal

The screenshot shows the MG3710E software interface. The main display shows two signal generators (SG1 and SG2) with their respective frequencies and amplitudes. The ARB Setup panel on the right is divided into two sections: Level Setting and Frequency Offset Setting. The Level Setting section shows Output A and Output B, both set to On, with Level A at -57.00 dBm and Level B at -7.00 dBm. The Frequency Offset Setting section shows Freq Offset at 5.000000 MHz, Freq Offset A at -3.000000 MHz, and Freq Offset B at 0 Hz. The Center Signal is set to A. The Start Offset is set to 0. The A/B Signal Setting is set to A&B, and the A/B Ratio is set to -50.00 dB. The Sampling Rate for both A and B is set to 11.520000000 MHz. The Spectrum A and Spectrum B are set to Normal. The Time Offset Setting is set to 0. The main display shows a frequency of 2.110 000 000 00 GHz and an amplitude of -7.00 dBm. The ARB Info (Combination) section shows two patterns: Pattern A (UL\_RMC\_12\_2kbps) and Pattern B (UL\_Interferer\_ov3).

 $\leq 0.8\%$ (rms) (typ.)

### High-power Output [Option 041\*1/071\*2]

\*1: High Power Extension for 1stRF [Option 041]

\*2: High Power Extension for 2ndRF [Option 071]

#### Level Accuracy is assured at high levels (CW)

Frequency Range	Standard	Option 041/071
100 kHz $\leq$ f < 10 MHz	+5 dBm	+5 dBm
10 MHz $\leq$ f < 50 MHz	+10 dBm	+10 dBm
50 MHz $\leq$ f < 400 MHz	+13 dBm	+20 dBm
400 MHz $\leq$ f $\leq$ 3 GHz		+23 dBm
3 GHz < f $\leq$ 4 GHz		+20 dBm
4 GHz < f $\leq$ 5 GHz		+13 dBm
5 GHz < f $\leq$ 6 GHz	+11 dBm	+11 dBm

These options expand the MG3710E RF output upper limit. They are used when compensating for level losses of parts in the measurement path.

- <-131 dBc/Hz (typ.) @1 GHz, 20-kHz offset, CW
- <-125 dBc/Hz (typ.) @2 GHz, 20-kHz offset, CW

SSB phase noise is an important performance index for signal generators. For example, when using a signal generator for the following purposes, it is important to pre-confirm that the signal generator performance satisfies the measurement specifications.

- Communications with narrow bandwidth of several kHz
- OFDM Signals with narrow subcarrier gap
- CW interference waveforms

## High-speed Switching

<600 μs @List/Sweep mode

To shorten tact times on production lines the MG3710E supports two standard modes each with high-speed frequency and level switching.

### Sweep Mode

In this mode, the dwell time per point or number of points is split between the frequency range and level range (Start/Stop). This mode is used when matching dwell time per point and frequency/level steps.

10 points, 500-μs Dwell Time

### List Mode

In this mode, the frequency, level and dwell time can be set for each of up to 500 points. This mode is used when wanting to set any dwell time, and frequency/level step per point.

ID	Frequency	Level	Dwell
1	499.50000000 MHz	-10.00 dBm	500 μs
2	499.80000000 MHz	-20.00 dBm	1 μs
3	500.00000000 MHz	-30.00 dBm	2 μs

## Supports Rubidium Reference Oscillator (Option)

Three reference oscillator options are supported. Select the high-stability reference oscillator option [Option 002] when requiring high accuracy depending on the measurement conditions; for even higher accuracy, select the rubidium reference oscillator [Option 001]. However, if external high-accuracy reference signals are available, selecting the standard reference oscillator option helps reduce unnecessary costs.

### Reference Oscillator

# High All-purpose Baseband Performance

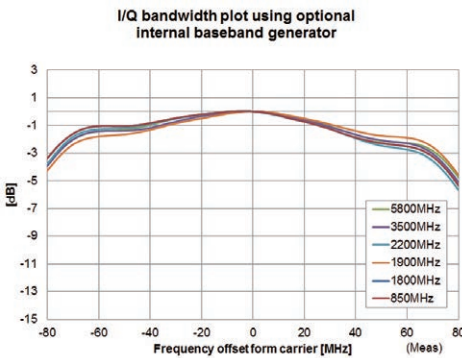

## Wide Vector Modulation Bandwidth

160 MHz\*/120 MHz (using Internal baseband signal generator)

160 MHz (using External IQ input)

Using the standard internal baseband signal generator offers a wide vector modulation bandwidth of 160 MHz.

\*: Supports firmware version 2.00.00 and later. Can generate 160-MHz bandwidth signals (Wireless LAN IEEE 802.11ac) only when using WLAN IQproducer MX370111A and 802.11ac (160 MHz) option MX370111A-002. The latest version can be downloaded from the Anritsu homepage. <<https://my.anritsu.com/home>>

**Point:**

One unit supports WLAN IEEE 802.11ac signal generation and output !

- Upper Frequency Limit: 6 GHz
- RF Modulation Bandwidth: 160 MHz
- Dual RF: Two RF Outputs
- Waveform Generation Software
- WLAN IQproducer (MX370111A & MX370111A-002)

The MG3710E supports output from 160-MHz bandwidth signals to non-contiguous 80 MHz + 80 MHz signals in one unit, which generally requires two signal generators.

Example: Support IEEE 802.11ac signal generation and output

11ac Bandwidth	20/40/80/160 MHz	80 MHz + 80 MHz (non-contiguous)
MG3710E*1	✓	✓*2

 \*2: 2ndRF option MG3710E-062 (2.7 GHz)/064 (4 GHz)/066 (6 GHz) installed.

## Free Waveform Generation

ASCII-format IQ sample data files created by other general-purpose EDA tools, such as MATLAB, can be converted into MG3710E waveform pattern files. Support for customer waveform pattern file creation makes the MG3710E ideal for R&D simulation applications too.

## Large-capacity Waveform Memory

64 Msamples (256 MB) [with 1stRF, 2ndRF]

256 Msamples (1 GB) [Option 045\*/075\*2]

1024 Msamples (4 GB) [Option 046\*/076\*2]

\*1: ARB Memory Upgrade 256 Msample for 1stRF [Option 045]  
 ARB Memory Upgrade 1024 Msample for 1stRF [Option 046]  
 \*2: ARB Memory Upgrade 256 Msample for 2ndRF [Option 075]  
 ARB Memory Upgrade 1024 Msample for 2ndRF [Option 076]

Memory size is the most important specification for arbitrary waveform memory. If the memory is small, large waveform patterns cannot be handled and the number of cases when multiple waveform patterns cannot be loaded increases. When this happens, the time to reload another waveform pattern wastes evaluation time and lowers efficiency. The MG3710E has a large 64 Msamples memory as standard and this can be upgraded to either 4 times (256 Msamples) or 16 times (1024 Msamples) by adding these options.

**Point:**

Adding the baseband signal combine function (Option 048/078) supports waveform memories which can either be used separately or linked to multiply the memory size.

\*: When attempting to load a waveform pattern exceeding the size of one memory, the memories are linked automatically to load the large pattern. However, in this case, other waveform patterns cannot be loaded into any remaining free space. When dealing with many waveform patterns, we recommend upgrading the ARB memory size. If the waveform pattern can be handled by one memory, other waveform patterns can be loaded into the remaining free space and the other memory. The maximum size per waveform pattern supported by the MG3710E varies with the IQproducer version.

## Maximum Waveform Pattern Size and Required Options for Simultaneous Use

\*1: The maximum size per waveform pattern supported by the MG3710E varies with the IQproducer version.  
 \*2: The Baseband Signal Combine option supports two ARB memories and can either set two different waveform patterns or combine them as one memory to support one large waveform pattern.

## BER Test Function [Option 021]

This option installs a BER measurement function for measuring error rates between 100 bps and 40 Mbps using the DUT demodulated Data/Clock/Enable signals. The results are displayed on the MG3710E screen.

**Input Bit Rate: 100 bps to 40 Mbps**

**Input Signal: Data, Clock, Enable (Polarity reversal supported)**

**Input Level: TTL**

**Measured Patterns:**

- PN9/11/15/20/23, ALL1, ALL0,
- Alternate (0101...), User Data,
- PN9fix/11fix/15fix/20fix/23fix

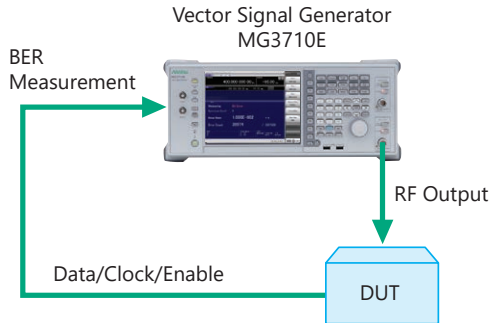

**Count Mode**

- Data: Measures until specified Data count
- Error: Measures until specified Error count

**Measurable Bit Count:  $\leq 2^{32} - 1$  (4,294,967,295 bits)**

**Measurement Mode**

- Single: Measures specified measurement bit count once
- Continuous: Repeats Single measurement
- Endless: Continues measurement to upper limit of measurement bits

The BER can be measured using the DUT-demodulated Data/Clock/Enable.

## BER Measurement Upper Limit

The table below shows one example of a BER measurement that indicates SyncLoss. Actual results depend on the specific communication systems and data rate, and will not necessarily match the measurement values below.

## AM/FM/ΦM/PM Function

This option supports the following modulation functions as standard. Analog modulations (AM/FM/ΦM) are performed on CW signals or arbitrary (ARB) waveform pattern signals.

Pulse modulation can be performed at any cycle or timing and also supports modulation using an external input signal.

**Amplitude Modulation (Internal Modulation Source)**

- Depth: 0 to 100% (Linear)
- 0 to 10 dB (Exponential)
- Modulation Frequency: 0.1 Hz to 50 MHz

**Frequency Modulation (Internal Modulation Source)**

- Deviation: 0 to 40 MHz
- Modulation Frequency: 0.1 Hz to 40 MHz, or (50 MHz-FM Rate), whichever smaller

**Φ-Modulation (Internal Modulation Source)**

- Deviation angle: 0 to 160 rad.
- or (40 MHz/ΦM Rate) rad., whichever smaller
- Modulation Frequency: 0.1 Hz to 40 MHz, or (40 MHz/ΦM Deviation), whichever smaller

**Pulse Modulation (Internal Modulation Source)**

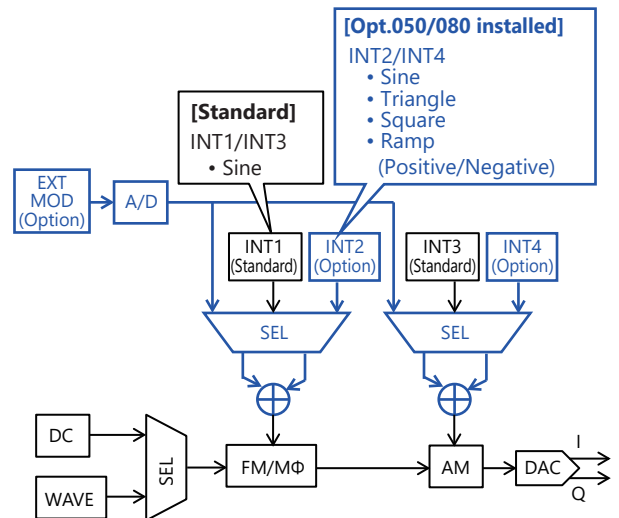

- Modulation Frequency: 0.1 Hz to 10 MHz
- Modulation Period: 10 ns to 20 s

**Additional Analog Modulation Input [Option 050/080]**

Adding additional analog modulation input options (Option 050/080) extends to two internal modulation sources (AM/FM/ΦM) and one external modulation source supporting simultaneous two-signal modulation.

## AWGN Generator [Option 049\*/079\*2]

- \*1: AWGN for 1stRF [Option 049]
- \*2: AWGN for 2ndRF [Option 079]

This option adds internally generated AWGN to the wanted signal. The AWGN output is switched on and off just by pressing the On/Off button.

**Absolute C/N Ratio:  $\leq 40$  dB**

## Local Signal I/O for MIMO Signal Source [Option 017]

The Sync Multi SG function shares local, baseband and trigger signals between multiple MG3710E units to output phase coherency signals synchronized with the signal output timing. An 8x8 MIMO test system is configured easily from four MG3710E units composed of one master and three slaves.

- Synchronization mode: Master, Slave, SG1 & 2
- Number of Slaves: 1 to 3
- Slave Position: 1 to 3
- Local Synchronization: On/Off
- IQ Phase Adjustment: -360 deg. to +360 deg., Resolution 0.01 deg.
- IQ Delay: -400 ns to +400 ns, Resolution 1 ps

- Common Setting
- Number of Slaves: 3
- LO Sync: On

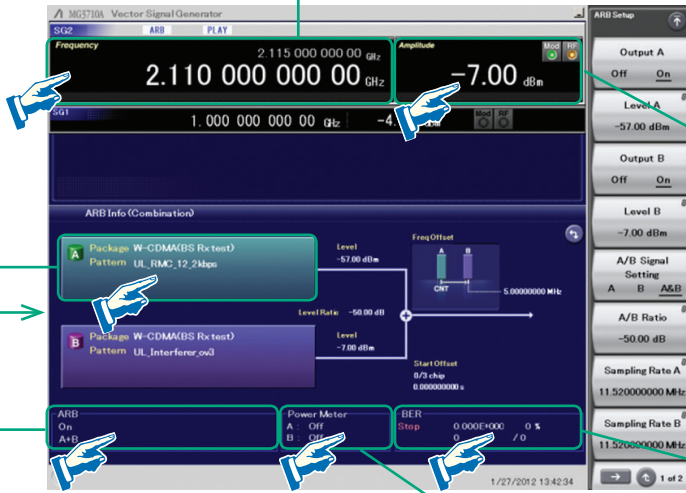

Note: Option-017 is not required when synchronizing the local signal and baseband clock of SG1 (1stRF) and SG2 (2ndRF) installed in one MG3710E unit.

## Two Signal Flowcharts

Pressing the on-screen  button toggles instantly between the Hardware Block Chart and the ARB Info screens.

The Hardware Block Chart is a quick-and-easy way to grasp the status of each block (ARB, AWGN, I/Q, Analog Mod, Pulse Mod, Local) at a glance.

The ARB Info screen displays more details about the ARB/AWGN block showing the baseband signal combine status of memory A + memory B, memory A + AWGN, etc.

## Frequency Channel Table

Sometimes frequencies need setting by Channel No. The built-in frequency channel table where frequencies are set by channel number is ideal for this application. Once set and saved, these pre-settings can be read whenever needed.

## Remote Control Interfaces

The MG3710E has GPIB, Ethernet and USB interfaces as standard, supporting the following functions:

- Control all functions, except power switch
- Read all status conditions and settings
- Interrupts and serial polls

While in the Local status, the interface is determined automatically by the communication start command from the external controller (PC). To change the interface, put the MG3710E into the Local status again by pressing the Local key on the front panel and then send a command via the desired interface.

### GPIB: Conforms to IEEE488.1/IEEE488.2 standards

SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT0, C0, E2

### Ethernet: Conforms to VXI-11 protocol using TCP/IP Control programs

SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT0, C0

### USB: Conforms to USBTMC-USB488 protocols

SH1, AH1, T6, L4, SR1, RL1, PP0, DC1, DT0, C0n

Remote control command is in common with the MG3710A and the MG3710E. Either select the SCPI mode command format defined by the SCPI Consortium, or select backwards compatible modes supporting earlier MG3700A, MS269xA, and MS2830A commands

## Trigger Input

Start and Frame triggers are installed as standard for outputting waveform patterns synchronized with externally input trigger signals.

### Start Trigger Operation

At Start Trigger operation, after the waveform pattern is selected, output is started and continued by the rise timing of the first external trigger signal. Second and subsequent input external trigger signals are disabled. This is used when receiving a Start Trigger signal and reference frequency signal from the DUT at the MG3710E.

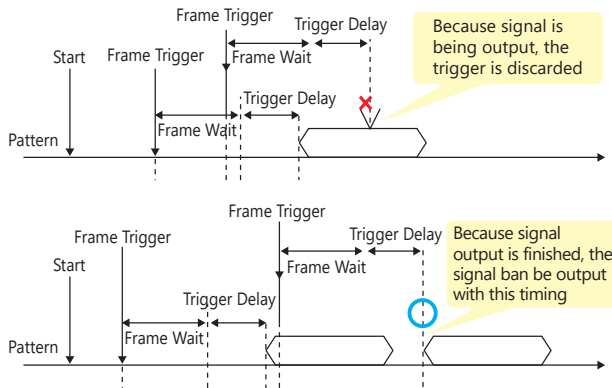

### Frame Trigger Operation

At Frame Trigger operation, one frame of the waveform pattern is output at the rise timing of the external trigger signal. When frame output is finished, the trigger wait state is returned. This is used when receiving a Frame Trigger signal from the DUT at the MG3710E.

Frame Trigger supports three operations as follows:

#### (1) No Retrigger

Ignores triggers received during pattern output (default setting)

#### (2) Buffered Trig

Holds triggers received during pattern output until current pattern output completed and then outputs next frame

#### (3) Restart on Trig

Immediately restarts pattern when trigger received during pattern output

## Marker Output Editing

### Marker 1 Output [Standard]

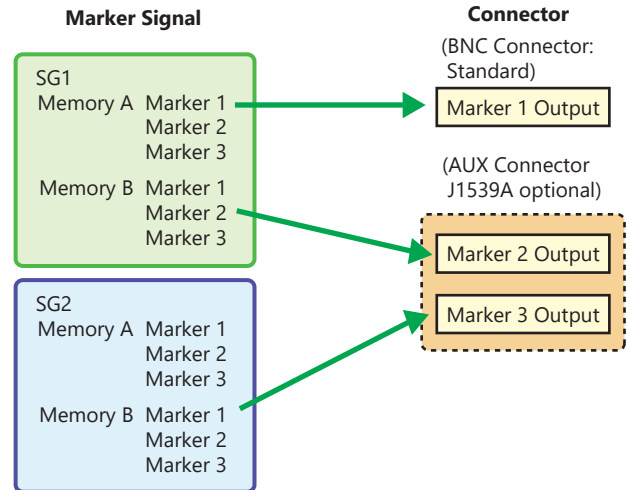

### Marker 2 & Marker 3 Output [Requires AUX Conversion Adapter J1539A]

When the Marker Setup function Edit Mode is Off, a marker signal combining the preset waveform pattern with marker information is output. When the Edit Mode is On, any marker for output can be set at the MG3710E screen. Up to 12 markers can be set for SG1/SG2, memory A/B and Marker 1 to 3.

SG2 Marker Setup Screen  
Memory A (1A/2A/3A), Memory B (1B/2B/3B)

There are three output connectors: Marker 1 Output on the rear panel and the AUX connector (Marker 2 Output and Marker 3 Output). The connector output signal layout can be selected freely.

The defaults are as follows:

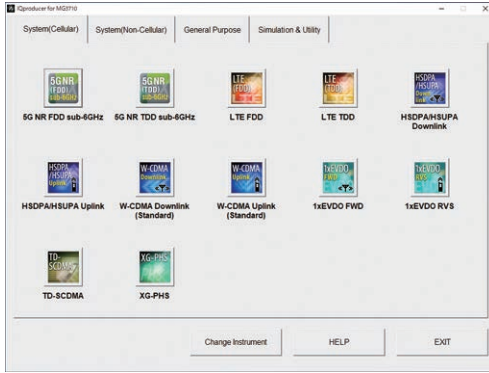

Marker Signal	Connector
SG1/Memory A/Marker 1	Marker 1 Output
SG1/Memory A/Marker 2	Marker 2 (@AUX)
SG1/Memory A/Marker 3	Marker 3 (@AUX)

# IQproducer Waveform Generation Software

## Waveform Generation Software (Separate license)

## Convert: Data Format Conversion

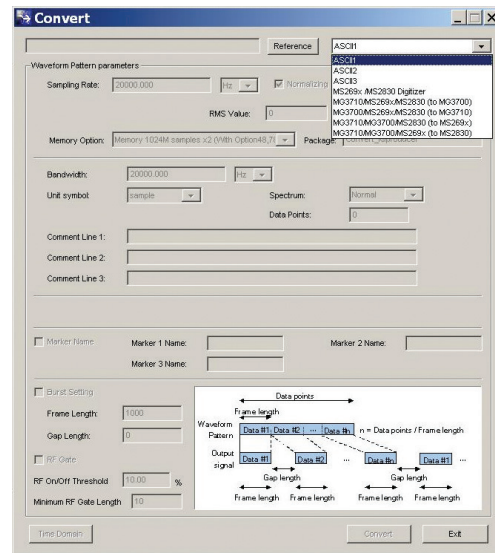

(1) ASCII-format IQ data created with other software, such as simulation software, can be converted to waveform pattern files used by the MG3710E.

(2) Data files captured with Anritsu MS269xA Signal Analyzers and the capture function of the MS2830A Signal Analyzer can be converted to waveform pattern files used by the MG3710E.

(3) Waveform patterns created by other Anritsu vector signal generators (MG3700A, MS269xA-020, MS2830A-020/021) can be converted to waveform pattern files used by the MG3710E and vice versa.

## Clipping

This function clips each type of waveform pattern. The clipped waveform pattern is created by setting the filter, bandwidth, and repetition times.

## AWGN Waveform Generation

This function establishes the sampling rate and bandwidth, allowing any AWGN waveform pattern to be created. In addition, when the first combined waveform pattern (Wanted Signal) is selected, the Wanted Signal bandwidth and sampling rate are set automatically. The resulting AWGN waveform pattern can be combined with an existing waveform pattern, which is useful for base-station dynamic-range measurements.

AWGN Screen

## Main setting parameters

- (1) Wanted Signal Bandwidth:
  - Setting range: 0.0010 MHz to 120.0000 MHz
- (2) AWGN BW (B)/Wanted Signal BW (A):
  - Magnification of AWGN to Wanted Signal
  - Setting range: 1.0, 1.5, 2.0, 2.5
- (3) Sampling Rate:
  - Setting range: 0.0200 MHz to 160.0000 MHz
  - Note: Same value as wanted signal
- (4) AWGN Bandwidth (B):
  - Calculated automatically from (1) and (2) under following items:
  - Limit range: 0.001 MHz to 20.000 MHz: Sampling rate/2 max.
  - 20.001 MHz to 120.000 MHz: Sampling rate max.

## Transfer and Settings: Data Transfer

Waveform pattern files, graphics files, firmware version upgrades, etc., can be moved between a LAN-connected PC and MG3710E. When several MG3710E units are connected via LAN, waveform patterns can be transferred by a single operation, helping cut work times. Moreover, waveform pattern files saved on the hard disk of a remote- controlled MG3710E can be opened in arbitrary waveform memory to select and output the waveform pattern.

Transfer & Setting Screen

## Combination File Edit Function

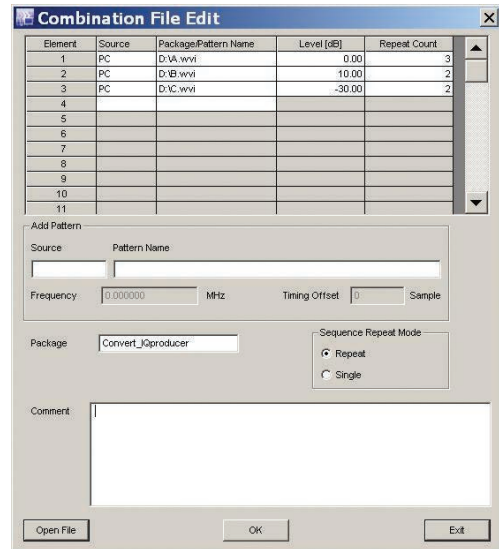

The Combination File Edit function is a Transfer & Setting Edit function. The following parameters are set automatically by selecting the Combination File:

- Waveform pattern
- Repetition times
- Interference waveform pattern (memory B)
- Frequency offset used when memory A and B added
- Level ratio (This value represents CN when memory A and B are added, or the relative level between elements when using only memory A.)

Using Combination Files that place the wanted and interference waveforms in separate memories makes it easy to measure receiver characteristics.

Combination files can also be used to create waveform sequences. Receive signal status transitions can be verified by using Sequence Mode Combination files defining switching and repetition times for multiple waveform patterns. Required waveform patterns and combination are saved to memory. Moreover, external triggers can be used to repeat each waveform pattern any number of times.

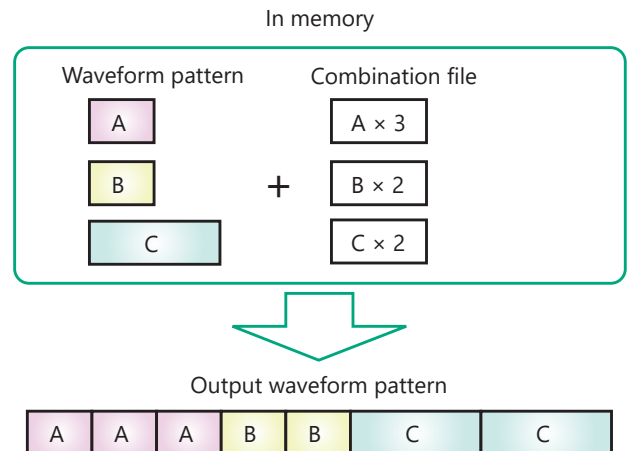

- Efficient memory use
- Validate response status transitions
- Manual control of sequences

**Combination of Baseband Signal for 1stRF** MG3710E-048  
**Combination of Baseband Signal for 1stRF Retrofit** MG3710E-148

Two internal waveform memories. Selects two waveform patterns per one RF output for setting mutual frequency offset, level offset, delay time, etc., to output 2 signals from 1 RF connector

**AWGN for 1stRF** MG3710E-049  
**AWGN for 1stRF Retrofit** MG3710E-149

Internal AWGN addition function. Adjusts AWGN bandwidth range setting as follows for selected waveform pattern:

Band limit: waveform pattern sampling rate × 0.2  
 to waveform pattern sampling rate × 0.8 .  
 CN: ≤40 dB

**Additional Analog Modulation Input for 1st RF** MG3710E-050  
**Additional Analog Modulation Input for 1st RF Retrofit** MG3710E-150

Adds additional analog modulation inputs function for 1stRF. Extends to two internal modulation sources (AM/FM/ΦM), and one external modulation source supporting simultaneous two-signal modulation. Installs external signal input connector on rear panel of main unit.

<b>Additional Analog Modulation Input for 2nd RF</b>	<b>MG3710E-080</b>
<b>Additional Analog Modulation Input for 2nd RF Retrofit</b>	<b>MG3710E-180</b>

Adds additional analog modulation inputs function for 2ndRF. Extends to two internal modulation sources (AM/FM/ΦM), and one external modulation source supporting simultaneous two-signal modulation. Installs external signal input connector on rear panel of main unit.

## Options (Software)

### Waveform Patterns & License

#### DFS Radar Pattern

**MX370073B**

Sets pulse signals for testing 5-GHz band WLAN DFS functions. The MX370073B supports the waveform patterns for the FCC and Japan MIC test specifications. Pulse signals are output simply by selecting the pattern.

#### DFS (ETSI) Waveform Pattern

**MX370075A**

Sets pulse signals for testing 5-GHz band WLAN DFS functions. The MX370075A supports the waveform patterns for the ETSI specifications. Pulse signals are output simply by selecting the pattern.

#### What is DFS?

5-GHz band wireless LAN devices like meteorological radar, marine radar, etc., have a Dynamic Frequency Selection (DFS) function for switching to an empty channel when detecting a radio wave.

At testing, pulse, chirping and hopping signals like those used by radar are output from the SG to the WLAN equipment to check that it does not output signals in that channel.

#### ISDB-Tmm Waveform Pattern

**MX370084A**

Archive of ARIB STD-B46 waveform patterns. Supports MER and spectrum evaluation of Tx characteristics tests and sensitivity/simple BER tests at Rx characteristics tests.

### IQproducer License

IQproducer is PC application software for generating waveform patterns. The parameters are set using IQproducer and the waveform pattern is created to output the signal by selection at the MG3710E. This one software application includes all the following systems. Since it runs on any PC, the supported functions and parameter range can be verified before purchase.

When outputting a waveform pattern from the MG3710E, no signal is output unless a license for that system is installed in the main frame.

\* Read the "IQproducer catalog" for details.

#### HSDPA/HSUPA IQproducer

**MX370101A**

Sets parameters according to HSDPA/HSUPA (Uplink and Downlink) specifications, and generates HSDPA/HSUPA waveform patterns including Fixed Reference Channel (3GPP TS 25.101 Annex A.7).

#### TDMA IQproducer

**MX370102A**

Sets required parameters for TDMA waveform patterns and generates various waveform patterns. Setting parameters include Modulation, Frame, Slot, Data, Filter, etc. Supports wide application range including public wireless.

#### CDMA2000 1xEV-DO IQproducer

**MX370103A**

Sets parameters according to CDMA2000 1xEV-DO Forward/Reverse specifications and generates 1xEV-DO waveform patterns.

#### Multi-carrier IQproducer

**MX370104A**

Generates multi-carrier waveform patterns combination files using MG3710E Baseband Signal Combine function (requires Option 048/078).

#### DVB-T/H IQproducer

**MX370106A**

Sets parameters according to ETSI EN 300 744 V1.5.1 (2004-11) physical layer standard and generates DVB-T/H waveform patterns. Generated waveform patterns can be used for device TRx characteristics evaluation tests (Error Correction, BER graphics).

#### Fading IQproducer

**MX370107A**

Performs IQ channel fading processing, correlation matrix calculation, AWGN combination. Input data file created by selecting waveform pattern file created with other IQproducer software, and IQ data (ASCII) created with other general-purpose simulation tools.

#### LTE IQproducer

**MX370108A**

Generates wanted waveform patterns with parameters modified according to 3GPP TS 36.211, TS 36.212, TS 36.213 LTE FDD specifications.

#### LTE-Advanced FDD Option

**MX370108A-001**

Installing in the MX370108A supports simple generation of carrier aggregation signals added by 3GPP Rel. 10. Additionally, clustered SC-FDMA signals can be generated at Uplink.

\*: Requires MX370108A

#### LTE TDD IQproducer

**MX370110A**

Generates wanted waveform patterns with parameters modified according to 3GPP TS 36.211, TS 36.212, TS 36.213 LTE TDD specifications.

#### LTE-Advanced TDD Option

**MX370110A-001**

Installing in the MX370110A supports simple generation of carrier aggregation signals added by 3GPP Rel. 10. Additionally, clustered SC-FDMA signals can be generated at Uplink.

\*: Requires MX370110A

## Options (Software)

### WLAN IQproducer

Generates waveform patterns for IEEE Std 802.11-2007 and IEEE Std 802.11n-2009 IEEE 802.11a/b/g/j/n/p specifications.

#### 802.11ac (160 MHz) Option

Installing in the MX370111A supports waveform patterns generation compliant with IEEE 802.11ac specifications.

\*: Requires MX370111A. Only for MG3710E.

### MX370111A

#### MX370111A-002

### TD-SCDMA IQproducer

Generates wanted waveform patterns with parameters modified according to TD-SCDMA specifications standardized by TRx characteristics evaluation tests (excluding performance tests) for 3GPP TS 25.221, TS 25.222, TS 25.223, TS 25.105, TS 25.142

#### 5G NR TDD sub-6 GHz IQproducer

#### 5G NR FDD sub-6 GHz IQproducer

Generates 3GPP TS 38.211, TS 38.212, and TS 38.213 defined waveform patterns in compliance with the 5G NR sub-6 GHz specifications.

# Rx Characteristics Evaluation Tests for Digital Narrowband Communications, Public Safety, etc.

### Supports SSB Phase Noise Performance $-140$ dBc/Hz nom. (@100 MHz)

Phase noise performance affects measurement results at narrow bandwidths of several kHz. In particular, high phase-noise performance is required for interference waveforms.

Improved SSB phase noise supports wider specification margins and stable measurements to improve yields.

$<-140$ dBc/Hz (nom.)	@100 MHz, 20-kHz offset, CW
$<-131$ dBc/Hz (typ.)	@1 GHz, 20-kHz offset, CW
$<-125$ dBc/Hz (typ.)	@2 GHz, 20-kHz offset, CW

### TDMA IQproducer [MX370102A] Supports Following Modulation Methods

BPSK, DBPSK, PI/2DBPSK, QPSK, DQPSK, PI/4DQPSK, 8PSK, D8PSK, 16QAM, 32QAM, 256QAM, ASK, 2FSK, 4FSK,

The TDMA IQproducer PC software generates waveform patterns with any frame format or filter settings. One software package supports various narrowband digital communications.

Two modulation signals can be output from one RF output using the baseband signal combine function (Option 048/078). The level ratio (CN = 80 dB) and the frequency offset ( $\pm 80$  MHz max.) can be set as well. Usually, tests using two modulation signals, such as adjacent channel selectivity (ACS) and intermodulation characteristics (IM) require two signal generators as well as a software license for each signal generator. The MG3710E has two waveform memories for each RF output for setting and outputting different waveform data. One RF outputs the combined wanted + interference signals for a baseband bandwidth. Not only are equipment costs greatly reduced, but fewer external equipment, such as couplers, level adjusters, etc., as well as less setup time are required.

### Supports BER Measurement Function [Option 021]

The BER can be measured using the DUT-demodulated Data/Clock/Enable. The measurement results are displayed on the MG3710E screen.

Input Bit Rate: 100 bps to 40 Mbps

# Rx Sensitivity Tests for Multi-system Mobile Terminals, etc.

The MG3710E can save up to 1024 Msamples (4 GB) per RF. Memory size is one of the most important specifications for an arbitrary waveform signal generator. Small memory cannot save multiple waveform data and requires time-wasting reloading and measurement to output different signals each time.

With large waveform memory

- Switch loaded waveform data instantaneously
- Load multiple test waveforms  
→ Reduce number of reloads → Cuts times

License-free Pre-installed Waveform Patterns

WLAN 11a/b/g, Bluetooth, GPS, etc.

The following waveform patterns are available as options.

ISDB-Tmm (MX370084A)

Optional waveform generation tools are also available (license separately sold):

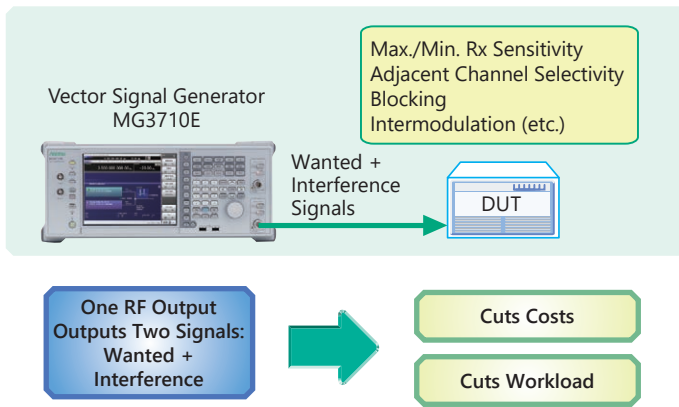

- DVB-T/H (MX370106A)
- WLAN 11a/b/g/n/j/p (MX370111A)
- WLAN 11ac (MX370111A-002)

Two RF outputs can be installed as an option.

Additionally, two RF output models with different frequencies can be installed. For example, if WLAN 11b/g are the wanted waveforms, mobile signals for LTE FDD, LTE TDD, W-CDMA, GSM, etc., are considered interference signals. Generally, these tests have high hardware and software costs because two separate signal generators are required. Using the MG3710E, the total investment costs for interference tests under simulated service conditions, such as WLAN + LTE FDD, or ISDB-T + W-CDMA, are reduced by selecting models with different frequencies for the 1stRF and 2ndRF outputs.

## Wanted and Interference Waveforms for Rx Characteristics Evaluations of Cellular Base Station, etc.

Two modulation signals can be output from one RF output using the baseband signal combine function (Option 048/078). The level ratio (CN = 80 dB) and the frequency offset ( $\pm 80$  MHz max.) can be set as well. Tests using two modulation signals, such as Adjacent Channel Selectivity (ACS), Blocking, and Intermodulation (IM), etc., require two separate signal generators and a license for each, greatly increasing equipment costs and setting work loads. The MG3710E has two waveform memories for each RF output for setting and outputting different waveform data. One RF outputs the combined wanted + interference signals for a baseband bandwidth. Not only are equipment costs greatly reduced, but fewer external equipment, such as couplers, level adjusters, etc., as well as less setup time are required. In comparison to previous Anritsu instruments, frequency offsets can be set for both memory A and B, and the sampling rate for memory A and B can be adjusted automatically.

Two RF outputs can be installed as an option. A different frequency, level and waveform pattern/CW can be set for each RF output, which is ideal for Rx tests using two signals for frequency offset that cannot be set using the baseband combine function. For example, sometimes at MSR, multiple signals must be output simultaneously in the 200-MHz band, requiring two RF outputs.

### Multi-Standard Radio Rx Characteristics Tests

Installing the BER measurement (Option 021) and AWGN Generation (Option 049/079) options supports the extra functions required for Rx tests of each type of communications system.

Installing two RF units in one MG3710E unit makes it easy to synchronize between channels. And adding the Universal Input/Output option (Option 017) supports Local Signal I/O for synchronizing with other MG3710E units.

The IQproducer waveform generation software can be used with one license when two RF units are installed. For example, for LTE 2x2 MIMO tests, LTE IQproducer can generate two patterns for the Tx antenna signals and Fading IQproducer can generate two patterns with spatial multiplexing for the Rx antennas. Previously, using two signal generators required two separate licenses for LTE and fading, but now only one license is required to use IQproducer with the MG3710E with two RF units installed, helping cut software costs too.

\*3: Select any one. Selected memory size enabled and all others disabled.

\*4: Replace the MG3710E CPU board with Windows Embedded Standard 7 (Windows 7) and upgrade the operating system to Windows 10 IoT Enterprise LTSC2019.  
Windows 7 is installed in MG3710E units ordered until August 2020.  
Windows 10 is installed in MG3710E units ordered from September 2020 and has a label indicating C2 attached near the serial number.

- 1 Power Switch**  
Switches between standby status in which AC power is supplied, and operating power-on status. At standby the key lamp is orange; at power-on it is green. To supply power press the switch for 2 seconds or more.
- 2 HDD Lamp**  
Lit when internal hard disk being accessed.
- 3 Copy Key**  
Copies screen display to file.
- 4 Recall Key**  
Displays menu for recalling parameter files.
- 5 Save Key**  
Displays menu for saving parameter files.
- 6 Cal Key**  
Displays menu for performing calibration.
- 7 Local Key/Remote Lamp**  
Local Key: Return remote control via GPIB, Ethernet, USB (B) to local control and enables panel setting.  
Remote Lamp: Lit while MG3710E under remote control.
- 8 Preset Key**  
Displays Preset menu to initialize parameter settings.
- 9 Q Input Connector**  
Input for external Q phase signal. Requires Option 018 and only supports SG1 (1stRF); does not support SG2 (2ndRF).
- 10 I Input Connector**  
Input for external I phase signal. Requires Option 018 and only supports SG1 (1stRF); does not support SG2 (2ndRF).
- 11 Function Keys**  
Select and execute functions displayed at right edge of display. Displayed functions menus are multi-level with page hierarchy.
- 12 SG1/SG2/IQpro Keys**  
SG1: Switches setting target to SG1  
SG2: Switches setting target to SG2  
IQpro: Starts IQproducer on main frame. IQproducer may not start running for a few seconds to minutes after pressing this key.
- 13 Main Function Keys**  
Displays menus for setting and executing main functions: Frequency], [Level], [Sweep/List], [Mode], [AM], [FM/ΦM], [Pulse], [I/Q], [Load], [Select], [AUX Fctn], [Utility]
- 14 Arrow/Enter/Cancel/Help/Incr Set/Context/Windows Keys**  
Help: Pressing function key after Help key displays help for pressed function key  
Incr Set: Sets increment/decrement steps for each parameter  
Context: Performs same operation and right mouse click  
Windows: Performs same operation as Windows key
- 15 Ten Key Pad**  
Input numeric values for each parameter setting screen.
- 16 Rotary Knob**  
Selects and sets displayed items.
- 17 2nd RF Output [Option 062/064/066]**  
Mod On/Off: Switched 1stRF/2ndRF modulation On/Off.  
Lamp lit during modulation.  
On/Off: Switches RF output On/Off.
- 18 RF Output [Option 032/034/036]**
- 19 USB Connector (Type A)**
- 20 Tab/Alt/BS/Ctrl/Shift/Alt-Tab Key**  
Shift key: Executes panel operation indicated by blue characters. Press Shift key and then required key.

## Easy-to-use Panel

- 1 LO Input**  
Connector for inputting external Local signal.  
Requires Option 017.
- 2 LO Output**  
Outputs Local signal. Requires Option 017.
- 3 BB REF CLK Input**  
Connector for inputting reference clock signal for sampling clock of built-in arbitrary waveform generator.  
Requires Option 017.
- 4 BB REF CLK Output**  
Connector for outputting arbitrary waveform generator sampling clock signal. Requires Option 017.
- 5 Sweep Output**  
Connector for outputting either 10 V Sweep Signal synchronized with Sweep or Sweep Status signal.  
Requires Option 017.
- 6 Reserve 1**  
Terminal for future extension.
- 7 Reserve 2**  
Terminal for future extension.
- 8 Ext Mod Input SG1**  
Option connector for inputting external signal for additional analog modulation input for the SG1. Requires Option 050.
- 9 Ext Mod Input SG2**  
Option connector for inputting external signal for additional analog modulation input for the SG2. Requires Option 080.
- 10 I Output/Q Output/I-bar Output/Q-bar Output**  
Connector for outputting internal baseband I/Q signal or inverse I/Q signal. Requires Option 018.
- 11 AC Inlet**
- 12 REF Input**  
Connector for inputting external reference frequency signal (5/10/13 MHz).
- 13 Buffer Output**  
Connector for outputting built-in reference frequency signal (10 MHz).
- 14 Start Frame TRIG Input**  
Connector (pulled up internally) for inputting external trigger signal.
- 15 Marker 1 Output**  
Connector for outputting Marker 1 signal. (Marker 2/3 output from AUX connector).  
Requires AUX Conversion Adapter J1539A.
- 16 Pattern TRIG 1 Input**  
Connector (pulled up internally) for inputting external trigger signal.
- 17 GPIB**  
Connector Connector used for remote control via GPIB.
- 18 USB Connector (Type A)**  
Connector for USB memory, keyboard, mouse, etc.
- 19 USB Connector (Type B)**  
Connector used for remote control via USB.
- 20 LAN**  
Connector for personal computer and network.
- 21 Monitor Output**  
RGB connector for external display.
- 22 HDD (Opt)**  
Slot for hard disk option. Requires Option 011.
- 23 AUX**  
Connector for following I/O signals.  
Requires AUX Conversion Adapter J1539A.
  - BER Measurement Signal (Input): Data, CLK, Enable
  - Marker Signal (Output): Marker 2, Marker 3
  - Pulse Signal for external Pulse Modulation (Input): Pulse Mod
  - Signal synchronized with Pulse Modulation signal at PM (Output): Pulse Sync, Pulse Video Out
  - Trigger signal at timing of internal Baseband Ref Clock based on Start/Frame trigger (Out): Sync Trigger Out
- 24 HDD**  
Hard disk slot

### DAC Resolution

14/15/16 bits

\*: Supports firmware version 2.00.00 and later. Only when using WLAN IQproducer MX370111A and 802.11ac (160 MHz) option MX370111A-002.

## EVM Performance

18°C to 28°C, after CAL

W-CDMA (Test Model 4):

Output Frequency: 800 MHz to 900 MHz, 1.8 GHz to 2.2 GHz  
 $\leq 0.62\%$ (rms)  
 $\leq 0.6\%$ (rms) (typ.)

GSM:

Output Frequency: 800 MHz to 900 MHz, 1.8 GHz to 1.9 GHz  
 $\leq 0.84\%$ (rms)  
 $\leq 0.8\%$ (rms) (typ.)

EDGE:

Output Frequency: 800 MHz to 900 MHz, 1.8 GHz to 1.9 GHz  
 $\leq 0.84\%$ (rms)  
 $\leq 0.8\%$ (rms) (typ.)

LTE (20 MHz Test Model 3.1):

Output Frequency: 600 MHz to 2.7 GHz  
 $\leq 0.82\%$ (rms)  
 $\leq 0.8\%$ (rms) (typ.)

## Dimensions, Weight

177 (H)  $\times$  426 (W)  $\times$  390 (D) mm  
 $\leq 13.7$  kg (with 1stRF, excluding other option)

## Power Requirements

100 V(ac) to 120 V(ac), 200 V(ac) to 240 V(ac)  
 50 Hz to 60 Hz

## EU Standards (CE Marking)

EMC: 2014/30/EU, EN61326-1, EN61000-3-2  
 LVD: 2014/35/EU, EN61010-1  
 RoHS: 2011/65/EU, EN50581
