Anritsu Power Meters and Power Sensors: Accurate, Fast, and Affordable

Anritsu offers the world's most comprehensive range of power meters. The ML2490A series has the performance required for narrow fast rising-edge pulse power measurements (e.g. radar), also providing coverage for Wideband power measurements on signals such as W-CDMA, WiMAX, LTE, and WLAN.

The ML2430A series of power meters are designed for CW applications, offering a combination of accuracy, speed, and flexibility in a low cost package.

ML2490A Series

- > **High-Performance and Precision** – 65 MHz instrument bandwidth with 1 ns measurement resolution for precise rise-time measurements of radar signals or for measuring the latest 4G orthogonal frequency-division multiplexing (OFDM) signals.
- > **High-Speed Sampling** – Up to 1 Gs/s sample rate produces accurate profiles of radar, W-CDMA, WiMAX, LTE, WLAN, and other complex OFDM signals. Displays include peak, average, and crest factor of any input signal.
- > **Trigger** – Comprehensive capabilities offer precise triggering using internal or external sources. Continuous or single shot modes available.
- > **Measurement Gates and Markers** – Multiple gates and markers for measuring: peak power, multi-pulse power, signal droop, rise-time and fall-time, pulse width, and PRI.

ML2430A Series

- > **Fully Featured General Purpose Power Meter** – Ideal for CW applications, offering a combination of speed, accuracy, and flexibility in a low-cost package.
- > **Designed for Field Applications** – Portable, rugged, and splash-resistant chassis design handles the roughest field treatment. Add a front panel cover and soft case for further protection. There is also an optional NiMH battery, providing six hours continuous operation.
- > **Graphics Display** – Provides graphical display of pulsed power or TDMA signals, revealing individual time slots. Frame triggering allows the user to measure the average power across a time slot.
- > **PowerSuite** – PowerSuite is free software for the ML2430A series power meters. This software is used to continuously view measurement traces on the PC in real-time or to archive data and plots for future analysis. PowerSuite runs on a standard PC running Windows® 95 or higher via GPIB or RS232.

- > **External Video (ML2490A)** – Provides 1/4 VGA signal to external monitor (CRT and LCD).
- > **Ethernet Interface (ML2490A)** – 10/100BaseT LAN interface allows remote control direct from a PC or local/wide area network using dynamic (auto) or static IP assignment.
- > **PowerMax™** – PowerMax™ is free graphical user interface software for the ML2490B Power Meter series. PowerMax provides an enhanced visualization of the instrument display and simplified remote control of the instrument, allowing:
 - Continuous view of measurement traces in real time.
 - Multiple gates and marker readings displayed at a glance.
 - Archiving or printing of data and plots for future analysis.
