High Performance GPS Disciplined Oscillator MU100090A:
## Commissioning and Verifying Mobile Backhaul

The MU100090A uses rubidium oscillator with has high holdover performance due to high stability, keeping absolute phase of the ToD for a long time after losing GPS signal.

- PTP Commissioning Test
  - MU100090A is located at the service demarcation point between the MxH and mobile service, and used to confirm the backhaul is compliant to the SLA.
  - MU100090A is able to emulate a base station as a PTP slave clock.
  - MU100090A measures max|TE| (absolute Time Error), cTE (Constant Time Error) and dTE (Dynamic Time Error) as metrics of phase/time synchronization.
- Protocol Test
  - After PTP session is established the tester shows a variety of status announced from the network and measures message rate.
  - This information is used as criteria to check if the network is working properly at the construction sites.
  - Support Profiles: G.8265.1, G.8375.1, G.8275.2, SMPTE2059-2
- SyncE frequency deviation measurement
  - The network frequency deviation can be confirmed using the SyncE and packet capture functions.
- One-way delay measurement using two MT1000A units
  - High-accuracy delay measurement is supported using two MT1000A units combined with the MU100011A.

CPRI RF Module MU100040B:
Fast Interference Monitoring of LTE Uplink Spectrum

CPRI   Spectrum   BBU Emulation

The MU100040B CPRI RF module enables the display of the LTE spectrum of both downlink and uplink signals on a cell site IQ data using CPRI technology between the Baseband Unit (BBU) and Remote Radio Head (RRH). A fast trace update rate ensures that even intermittent interferers are seen, and the use of Max Hold and Min Hold traces captures these events for simplified detection. When an interferer has been identified, it is possible to center this signal and zoom into it for more detailed analysis, further facilitating the identification of the source.
The spectrogram maintains a history of all traces over an extended time period for long term monitoring.
The BBU Emulation option provides customer the necessary tools to validate that a newly installed ALu/Nokia RRH is installed properly and functional, before the BBU is commissioned on site.

Network Master Pro MT1000A

Remotely Controlled Network Installation, Start-up, and Maintenance

The MT1000A has a useful remote function for network installation, start-up and maintenance. Connecting the office and job site via LAN allows engineers in the office to see screens at the on-site instrument while making settings and measurements, and troubleshooting. This provides an efficient link between engineers and on-site measurements to help cut network installation and maintenance costs.

Easy Connections Anywhere Using SORA (Site Over Remote Access)*

Using the MX109020A Site Over Remote Access (SORA hereafter) software measuring instruments can be remotely controlled easily anywhere.

The SORA cloud-based service allows office users to log-in to an Internet webpage to control the measuring instrument from the office via a smartphone.

Automated Field Test Environment

Easy to use   **I&M**

The MT1000A has automatic test functions for simple and efficient network commissioning. These MT1000A automated test functions run scenario files created in advance on a PC to perform tests automatically using preset measurement items, procedures, and pass/fail evaluation conditions. Since the scenario also handles report creation, evaluation and results, inexperienced workers can run accurate tests without operation mistakes and re-tests.

Scratches, chips and contamination on optical fiber connector end faces reduce transmission quality and increase errors. This leads to additional I&M work and cost. When the external optical fiberscope (G0382A USB Autofocus type, G0306B USB Standard type: sold separately) is connected, scratches and dirt on the optical connector end face can be confirmed visually. The connector image and detailed PASS/FAIL status is displayed as defined by IEC 61300-3-35 ensuring quality and consistency from connector to connector, technician to technician.
MT1000A screen displays details of the fiber tip core, cladding, adhesive and contact, with automatic Pass/Fail result judgement.
