

# Keysight Technologies

## 33600A Series Trueform Waveform Generators

Data Sheet

# Generate Trueform arbitrary waveforms with less jitter, more fidelity and greater resolution

## Revolutionary advances over previous generation DDS

Trueform technology

DDS technology

Lower Distortion

33600A Series waveform generators with exclusive Trueform signal generation technology offer more capability, fidelity and flexibility than previous generation Direct Digital Synthesis (DDS) generators. Use them to accelerate your development process from start to finish.

- 1 GSa/s sampling rate and up to 120 MHz bandwidth
- Arbs with sequencing and up to 64 MSA memory
- 1 ps jitter, 200x better than DDS generators
- 5x lower harmonic distortion than DDS
- Compatible with Keysight Technologies, Inc. BenchVue software

Over the past two decades, DDS has been the waveform generation technology of choice in function generators and economical arbitrary waveform generators. DDS enables waveform generators with great frequency resolution, convenient custom waveforms, and a low price.

As with any technology, DDS has its limitations. Engineers with exacting requirements have had to either work around the compromised performance or spend up to 5 times more for a high-end, point-per-clock waveform generator.

Keysight Technologies, Inc. Trueform technology offers an alternative that blends the best of DDS and point-per-clock architectures, giving you the benefits of both without the limitations of either. Trueform technology uses an exclusive digital sampling technique that delivers unmatched performance at the same low price you are accustomed to with DDS.

The table below highlights the revolutionary capabilities of Trueform technology.

|                             | <b>DDS:<br/>Traditional<br/>100 MHz<br/>waveform<br/>generator</b> | <b>Trueform:<br/>Keysight 80<br/>and 120 MHz<br/>waveform<br/>generator</b> | <b>Improvement</b>                       |
|-----------------------------|--|---|--|
| Edge jitter                 | <math>< 200\text{ ps}</math>                                       | <math>< 1\text{ ps}</math>  | 200x better                              |
| Custom waveform replication | Skips waveform points  | 100% point coverage   | Exact waveform replication               |
| Total harmonic distortion   | 0.2%   | 0.03%   | 5x better                                |
| Anti-alias filtering        | Must provide externally  | Always anti-aliased   | No anti-aliasing artifacts               |
| Sequenced arb               | Not possible   | Standard  | Easily create complex waveform sequences |

For more information about Keysight Trueform technology please visit: [www.keysight.com/find/trueform](http://www.keysight.com/find/trueform)

- Easily generate the full range of signals you need for the most demanding measurements
- Test your devices with confidence that the waveform generator is outputting the signals you expect
- Select just the capabilities you need now, then upgrade easily when your needs change

## Unique features of the 33600A Series waveform generators

|                      |   |
|----------------------|---|
| 100 MHz PULSE        | High-bandwidth pulse, 100 MHz, DDS pulse limited to 50 MHz<br>Set leading and trailing edge times independently                   |
| PRBS PATTERNS        | Provides standard PRBS patterns, PN3 through PN32<br>Select PN type, set bit rate, set edge times                                 |
| 2-CHANNEL COUPLING   | Dual-channel coupling, frequency and amplitude, and tracking<br>Set start phase for each channel, phase shift between channels    |
| COMBINING SIGNALS    | Sum two signals together, frequency and amplitude independent<br>2-tone (4-tone on 2-ch), square-sine, noise on pulse, and others |
| TRUEFORM ARBS        | Create up to 4 million samples standard, 64 million optional<br>Connect arb segments together, with up to 512 segments            |
| LOW VOLTAGE SETTINGS | Lower voltage range at 1 mVpp, DDS is only 10 mVpp<br>Set high and low voltage limits to prevent overload on DUT                  |
| BAND-LIMITED NOISE   | Adjust bandwidth to concentrate the energy of the noise<br>Noise source goes to full 120 MHz bandwidth                            |

## Unmatched capabilities for generating a full range of signals for the most demanding requirements

The 33600A Series waveform generators offer the common signals and features you expect, such as modulation, sweep and burst. However, it also offers features that give you the capabilities and flexibility you need to get your job done quickly, no matter how complex. An intuitive front-panel user interface, for example, can be quickly and easily relearned when your attention has been focused elsewhere. Built-in LAN, USB and optional GPIB interfaces allow you to easily control your instruments or transfer waveforms to your instrument. And that's just the beginning.

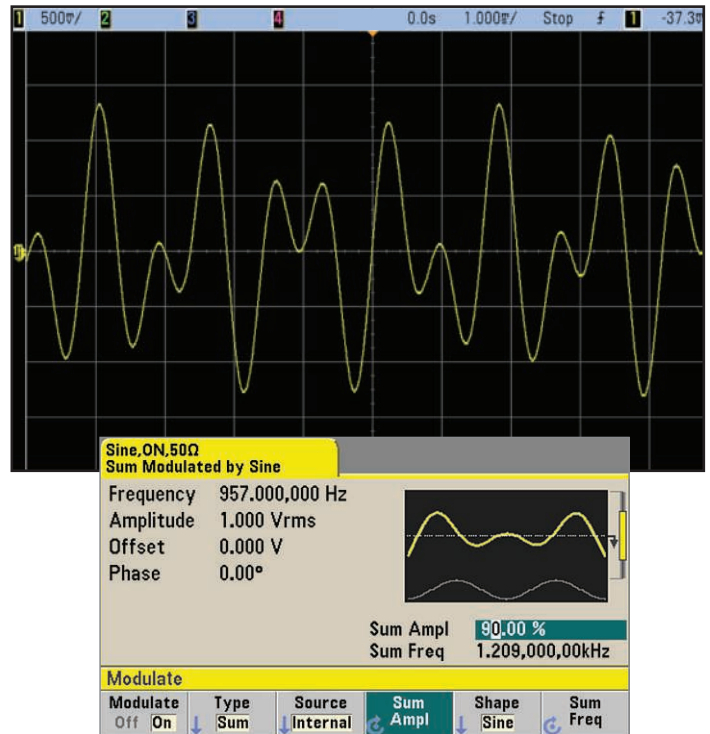

The 33600A Series waveform generators offer a variety of capabilities you can't find anywhere else—capabilities designed to help you accelerate your testing and get your project wrapped up faster:

### Waveform summing and combining capability

Easily add noise to your signal for margin and distortion testing using only a single channel. You can create dual-tone multifrequency signals without a dual-channel generator, which means you can preserve your budget for other test needs. On a two-channel model, you can sum and combine up to four signals.

### Variable-bandwidth noise

You can adjust the bandwidth of the built-in noise generator to control the frequency content of your signal. Apply just the frequency stimulus you need so you concentrate the energy of your waveform in frequency bands-of-interest.

Dual-tone signal created by summing waveforms using the modulation type "Sum."

The images at right show an approximate 10 dB increase in amplitude at 50 kHz when the bandwidth is reduced 10x. Note how the signal energy is increased in the frequencies-of-interest when the bandwidth is reduced, instead of being spread over a very wide bandwidth with lower amplitude at all frequencies.

## Capabilities (continued)

While DDS technology may skip points at higher frequencies, Trueform never skips points, and is always anti-aliased

Define any waveform shape and any waveform length using the Trueform arbitrary waveform capability. Your waveforms are always anti-aliased for exceptional accuracy, and you can play them at any rate you select. Play your signals as defined, at your exact sample rate, without the chance of missing short-duration anomalies that are critical for testing device reliability.

### Waveform sequencing

Waveform sequencing lets you create multiple configured waveforms with several common segments and lets you build long, complex waveforms using minimal instrument memory.

Trueform

DDS misses details

|-------------|-----------|--------|------|----------|---------------|
| ↻           | ↻         | ↻      | ↓    | ↓ Normal | ↓             |

Scope display of waveform.

## Capabilities (continued)

### Pseudo-random binary sequence (PRBS) pattern generation

Test your digital serial buses by streaming standard PRBS patterns—PN3 through PN32—without the need for a separate pulse generator. With fewer instruments, setting up your tests has never been easier. You won't find these built-in PRBS patterns in competitive waveform generators.

### Smart phone and tablet access to full documentation

Need a quick answer? Get instant access to instrument documentation in seven different languages in smart-phone-friendly WebHelp format. You can access all user documentation in the palm of your hand—no PC or hardcopy manuals required. Another feature you won't find in competitive function/arb generators.

### Flexibility in creating and playing waveforms

There are five ways to create arbitrary waveforms for use with the 33600A generator.

- Use the included Waveform Builder Basic software to edit and download a waveform file to the generator.
- Use 33503A Waveform Builder Pro software to create more complex waveforms and sequencing.
- Capture a waveform from an oscilloscope and download it to the generator.
- Create a waveform in MATLAB, Excel, etc. and download it to the generator.
- Use the generator's front panel to edit a waveform once it is in the generator.

You have lots of flexibility to choose the way you want to work.

Easily generate PRBS waveforms on the 33600A Series waveform generators.

You can select multiple sequence lengths (such as PN15) and bit rates up to 200 Mbit/sec to create PRBS signals.

Scan this QR code to access instrument documentation.

## Capabilities (continued)

### Built-in Web browser

Easily set up and control your 33600A Series generator remotely over a LAN connection using the built-in LXI Web browser. You can monitor your tests and adjust settings from another office or room, or even from home.

### Standard deep memory

If you want to test your design with long, complex waveforms with a variety of anomalies, you need to make sure your waveform generator has sufficient memory. The 33600A Series' standard memory is 4 MSamples deep. Typical DDS generators offer only a fraction of that amount but with the 33600A Series there is even a 64 MSample memory option available.

### Use the optional high-stability timebase for even better accuracy

Get improved timebase stability and frequency accuracy using the optional high-stability timebase. The optional timebase offers 0.1 ppm stability, which is 20x more stable than the standard timebase over one year.

## Signal integrity: test your devices with confidence that your signal generator is outputting the signals you expect

If your generator is introducing spurious signals or harmonics, you'll have a hard time producing reliable designs. To be successful, you need to test with clean, precise, low-noise signals. Keysight 33600A Series waveform generators offer the highest signal fidelity so you can generate the exact waveforms you need for your most challenging measurements. You can be confident you are seeing your design's characteristics, and not that of your waveform generator, in your measurements.

### 33600A Series waveform generators offer the following advantages:

#### Lowest jitter

With 1 ps jitter, 200x better than DDS generators, 33600A Series waveform generators offer unparalleled edge stability. You can even use them as a system clock for timing and triggering your other instruments. With better jitter performance, you can place edges more accurately, helping you reduce timing errors in your circuit design.

Trueform technology significantly improves jitter performance.

#### Faster edge times

The 33600A Series' 2.9-ns rise and fall times are more than twice as fast as you'll find in typical waveform generators. You can place edges with more confidence and more accurately set trigger points. Because of the faster transition, higher harmonic content is created, which helps you expand your understanding of your circuit.

#### Lowest harmonic distortion

With total harmonic distortion of just 0.03%, the 33600A Series offers 5x better fidelity than other generators. Clean, spurious-free signals don't introduce noise or artifacts. See your design's characteristics, not the waveform generator's, in your measurements.

Keysight 33600A Series waveform generators offer the lowest total harmonic distortion (THD) in its class.

Typical DDS generator has a higher noise floor and greater harmonics.

## Signal Integrity (continued)

### Reproduce lower-voltage output signals

Today's ultra-low-power products such as pacemakers, hearing aids and remote sensors use very low voltages. The 33600A Series lets you create signals as low as 1 mVpp. That's a 10x lower voltage range than typical waveform generators.

### High-bandwidth pulses

Create pulses up to 100 MHz with the 33600A Series. Most DDS-based generators offer reduced bandwidth when generating pulses. With a broader operating range, you have the frequency you need for a wider range of applications.

### Full bandwidth modulation sources

Eliminate the need for an external modulation source. The 33600A Series has a modulation frequency up to the frequency of the waveform being modulated. Existing DDS-based generators have a much lower internal modulation frequency. Now you can create your complex signals all within a single generator.

The screenshot displays the configuration interface for a Keysight M33600A Series Trueform Waveform Generator. It is divided into two main sections: Pulse and AM Modulated by Sine.

**Pulse Configuration (Left Panel):**

- Mode: **Pulse, ON, 50Ω**
- Frequency: 100.000 000 0MHz
- Amplitude: 1.000 Vpp
- Offset: 0.000 V
- Phase: 0.000°
- Pulse Width: 5.000ns
- Lead Edge: 2.9ns
- Trail Edge: 2.9ns

**AM Modulated by Sine Configuration (Right Panel):**

- Mode: **Sine, ON, 50Ω**
- Sub-mode: **AM Modulated by Sine**
- Frequency: 30.000,000,00MHz
- Amplitude: 2.400 Vrms
- Offset: 0.000 V
- Phase: 45.00°
- AM Depth: 100.00%
- AM Freq: 15.000,000,0MHz

**CH1 Waveform (Bottom Left):**

- Buttons: Sine, Square, Ramp, **Pulse**, Arb

**CH1 Modulate (Bottom Right):**

- Modulate: Off **On**
- Type: **AM**
- Source: **Internal**
- AM Depth: **Sine**
- More: **1 of 2**

## Select the capabilities you need now, then upgrade easily when your needs change

### Investment protection

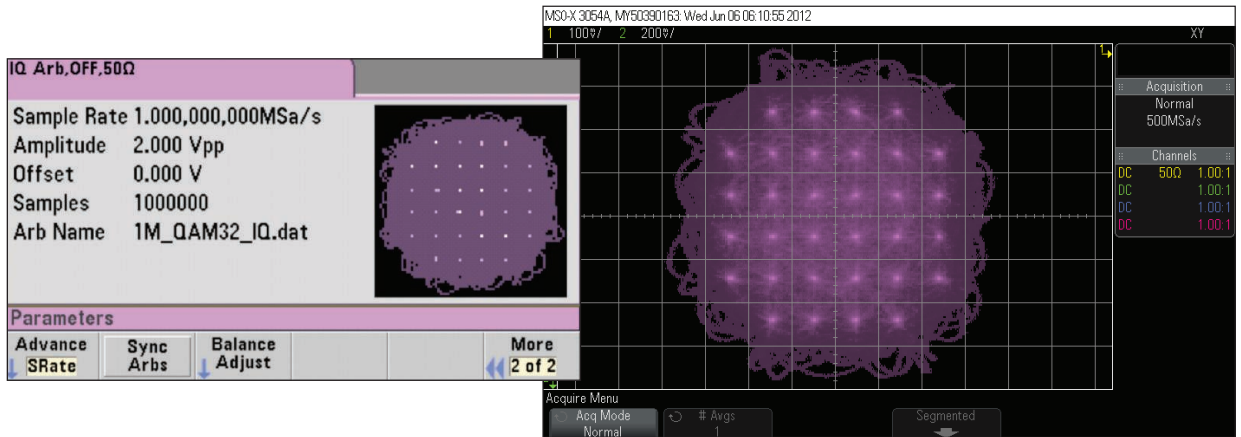

With most waveform generators, you get only what you pay for when you buy your instrument. But with 33600A Series waveform generators, there are four different models to choose from so you can purchase the capability you need now and upgrade later when your project needs change. Your investment in test equipment is protected. If you need to generate 120 MHz waveforms, or if you need deeper memory for generating more complex signals, you can easily add the capability after the fact with software upgrades. And there's no price penalty for adding the capability later.

| Model No. | Description        |
|-----------|--------------------|
| 33611A    | 80 MHz, 1-channel  |
| 33612A    | 80 MHz, 2-channel  |
| 33621A    | 120 MHz, 1-channel |
| 33622A    | 120 MHz, 2-channel |

Select from four models to get the capability that fits your budget now—then take advantage of easy software upgrades to expand your instrument's capabilities when you are ready.

### Application-specific options

If you are doing simple experiments in digital communications, use the optional IQ player to play IQ files on your 2-channel waveform generator.

Optional IQ player allows you to play IQ files on your 2-channel waveform generator.

LAN (LXI Class C), USB and optional GPIB connectivity for quick and easy connectivity to a PC or network.

### 4 models to choose from

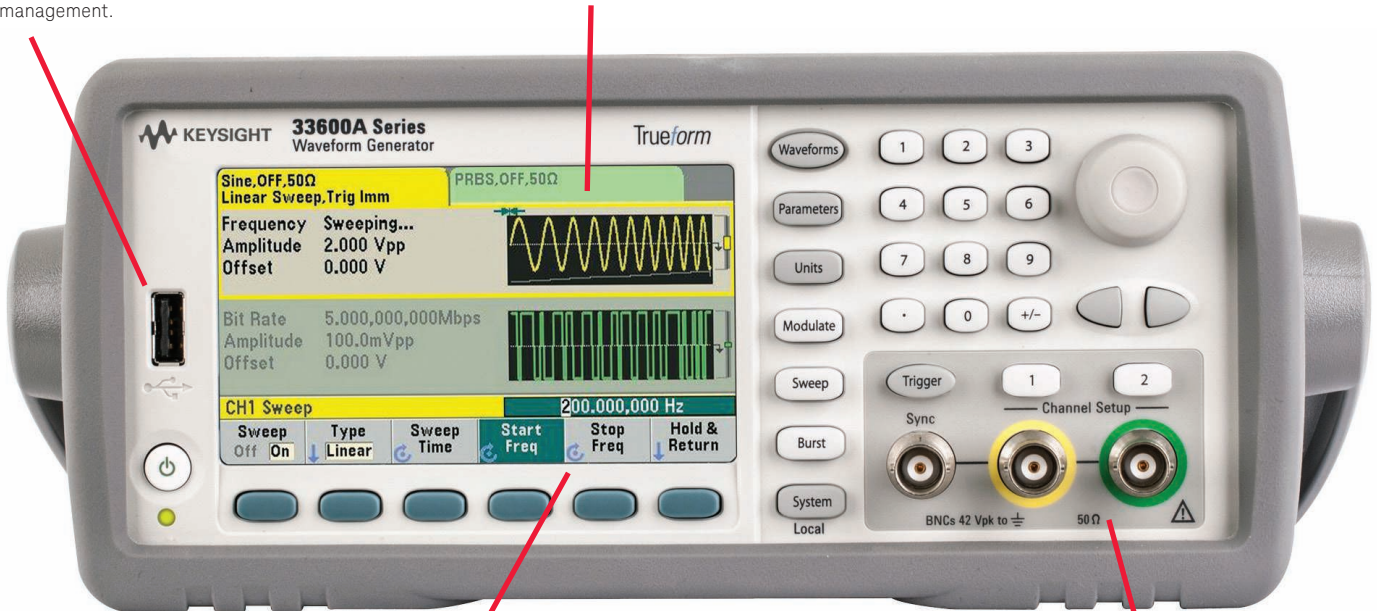

Choose the model with the capability you need now, knowing you can upgrade later. All models come with a rich set of built-in, standard features, including LAN, USB and optional GPIB interfaces, 4 MSample of memory, an external timebase input, and basic waveform generation software. You get everything you need to generate clean, precise, low-noise signals for testing your designs.

Supports remote operation using a Web browser to connect to a built-in web page.

Front-panel USB port for file management.

Large, color, graphical display offers simultaneous parameter setup, signal viewing and editing for easy operation.

Trueform arbitrary waveforms with sequencing for more accurate representation of user-defined signals.

Dual-channel mode with independent or coupled channels.

## 33600A Series Trueform Waveform Generator Test Challenges

Generating the signals you need for your measurements can be a tedious and time-consuming task, one that's often complicated by uncertainty whether your signal generator is outputting the signals you expect. Keysight's 33600A Series of waveform generators with exclusive Trueform technology offer you the capabilities, fidelity and flexibility you need to easily and confidently generate signals for even your most complex tests. Superior signal integrity guarantees you the highest resolution and lowest distortion for playing arbitrary waveforms with a complete representation of signals and creating complex waveform sequences. The ability to choose from a range of different upgradeable models means you have the functionality you need to easily address your test challenges today and in the future.

Shown at right are some of the key test challenges for which the 33600A Series Trueform waveform generators are especially well suited.

For more details and to download measurement briefs on these topics above visit: [www.keysight.com/find/trueformTC](http://www.keysight.com/find/trueformTC)

## Other Productivity Tools

### Keysight BenchLink Waveform Builder Pro Software

Easily create custom waveforms with advanced waveform creation and editing software

Get advanced signal creation/editing capability without tedious programming with optional 33503A BenchLink Waveform Builder Pro software. The Microsoft Windows-based program provides easy-to-use creation tools, such as an equation editor, waveform math and drawing tools, that make it easy to create custom signals. It features a standard function library, waveform sequencer and filters as well as windowing functions that allow you to easily modify and further refine your waveform. A library of built-in signals helps you quickly create more complex waveforms. The result is quicker, easier creation of custom waveforms, coupled with deeper analysis insight into your signals. For additional information and to download a 30-day trial version of the software, visit: [www.keysight.com/find/33503trial](http://www.keysight.com/find/33503trial)

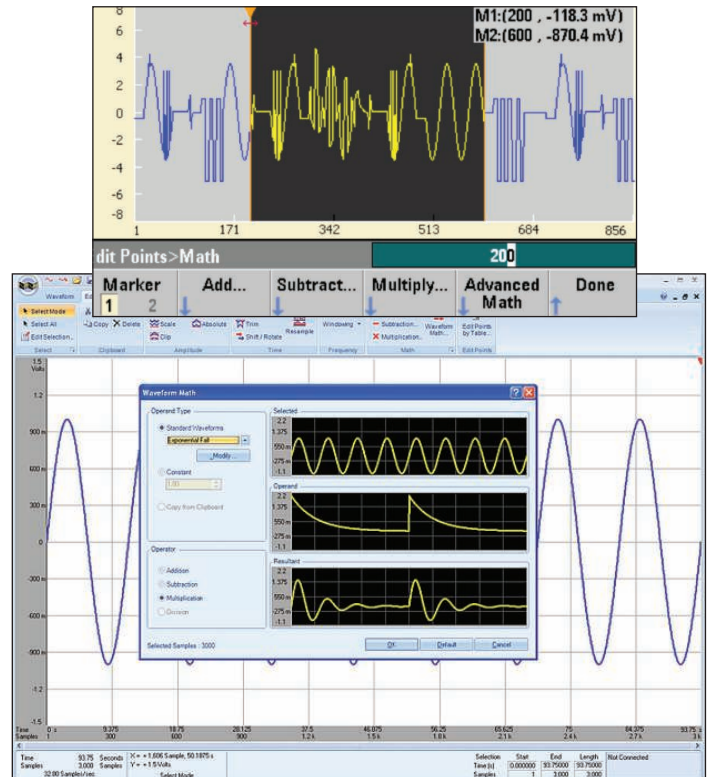

### Keysight BenchVue Software

Data capture simplified

Keysight 34840B BenchVue software for the PC accelerates your testing by providing intuitive, multiple instrument measurement visibility and data capture with no programming. You can derive answers faster than ever by easily viewing, capturing and exporting measurement data and screen shots. The integrated library feature includes access to manuals, FAQs, videos, and more—enabling you to expand your measurement knowledge and reduce test setup time. Mobile apps let you monitor and respond to long-running tests from anywhere. With BenchVue, it's as simple as: click, capture, done.

- Visualize multiple-instrument measurements simultaneously
- Easily capture data and screen shots and export in a few clicks
- Recall past state of your bench to replicate results
- Monitor and control your bench from mobile devices

Capture and analyze your data where you need to. Download the software today at: [www.keysight.com/find/BenchVue](http://www.keysight.com/find/BenchVue)

Create and edit complex waveforms using 33503A Waveform Builder Pro software.

## Configuration Guide

### Step 1. Choose your bandwidth and channel count

| <b>33600A Series waveform generators with Trueform technology</b> |        |        |         |         |
|---|--------|--------|---------|---------|
| Bandwidth   | 80 MHz | 80 MHz | 120 MHz | 120 MHz |
| Number of channels  | 1      | 2      | 1       | 2       |
| Waveform generator  | 33611A | 33612A | 33621A  | 33622A  |

### Step 2. Tailor your waveform generator for more demanding applications

| <b>Application</b>                   | <b>Order option</b>                    |
|--------------------------------------|--|
| Additional memory for long waveforms | MEM                                    |
| Baseband IQ Player with adjustments  | IQP (only available on 33612A, 33622A) |
| Security features with NISPOM        | SEC                                    |
| OCXO-high stability timebase         | OCX                                    |

### Step 3. Upgrade your waveform generator in the future

| <b>Upgrade desired</b>                         | <b>Order upgrade option</b>                                  |
|--|--|
| Increase bandwidth to 120 MHz                  | 336BW1U on 1-channel models<br>336BW2U on 2-channel models   |
| Increase arb memory to 64 MSa per channel      | 336MEM1U on 1-channel models<br>336MEM2U on 2-channel models |
| Add NISPOM and file security                   | 336SECU  |
| Add IQ baseband signal player to 2-channel arb | 336IQPU  |
| Add high-stability timebase                    | 33600U-OCX (Must return to Keysight)                         |
| Add GPIB                                       | 3446GPBU (Customer installable)                              |

NOTE: Cannot upgrade a 1-channel generator to a 2-channel generator

## Specifications

Unless otherwise stated, all specifications apply with a 50-Ω resistive load and automatic amplitude range selection enabled.

### Instrument characteristics

| Models & options                   |   |        |         |         |
|------------------------------------|---|--------|---------|---------|
| Model number                       | 33611A  | 33612A | 33621A  | 33622A  |
| Maximum frequency                  | 80 MHz  | 80 MHz | 120 MHz | 120 MHz |
| Number of channels                 | 1   | 2      | 1       | 2       |
| Option MEM                         | Increases arbitrary waveform memory from 4 MSa/channel to 64 MSa/channel  |        |         |         |
| Option IQP                         | IQ player (33612A/22A only)   |        |         |         |
| Option SEC                         | Enables NISPOM and file security  |        |         |         |
| Option OCX                         | Oven-controlled frequency reference for improved stability, jitter, and phase noise                             |        |         |         |
| Waveforms                          |   |        |         |         |
| Standard                           | Sine, Square, Ramp, Pulse, Triangle, Gaussian Noise, PRBS (Pseudorandom Binary Sequence), DC                    |        |         |         |
| Built-in arbitrary                 | Cardiac, Exponential Fall, Exponential Rise, Gaussian Pulse, Haversine, Lorentz, D-Lorentz, Negative Ramp, Sinc |        |         |         |
| User-defined arbitrary             | Up to 4 MSa (64 MSa with Option MEM) with multi-segment sequencing  |        |         |         |
| Operating modes & modulation types |   |        |         |         |
| Operating modes                    | Continuous, Modulate, Frequency Sweep, Counted Burst, Gated Burst   |        |         |         |
| Modulation types                   | AM, FM, PM, FSK, BPSK, PWM, Sum (carrier + modulation)  |        |         |         |

### Waveform characteristics (all 33600A models)

| Sine   |   |                                     |                               |  |
|--|---|-------------------------------------|-------------------------------|--|
| Frequency ranges   |   |                                     |                               |  |
| $V_{OUT} \leq 10 \text{ Vpp}$  | 1 μHz to 60 MHz, 1-μHz resolution               |                                     |                               |  |

## Waveform characteristics (continued)

| Arbitrary waveform sequencing |  |
|-------------------------------|--|
| Operation                     | Individual arbitrary waveforms (segments) can be combined into user-defined lists (sequences) to form longer, more complex waveforms. Each sequence step specifies whether to repeat the associated segment a certain number of times, to repeat it indefinitely, to repeat it until a Trigger event occurs, or to stop and wait for a Trigger event. Additionally, the behavior of the Sync output (Marker) can be specified in each step. To improve throughput, multiple sequences and segments can be pre-loaded into volatile memory. |
| Segment length                | 32 Sa to 4 MSa per channel (64 MSa with Option MEM) in increments of 1 Sa  |
| Sequence length               | 1 to 512 steps   |
| Segment repeat count          | 1 to 10 <sup>6</sup> or "Infinite"   |

## Waveform output characteristics

| General   |   |
|---|---|
| Connector                                       | Front-panel BNC, shell and pin isolated from chassis ( $\pm 42$ V maximum)  |
| Function  | On, Off, or Inverted  |
| Output impedance (nom)                          | 50 $\Omega$   |
| Isolation                                       | Connector shells for channel output(s), Sync, and Mod In are connected together but isolated from the instrument's chassis. Maximum allowable voltage on isolated connector shell or pin is $\pm 42$ V relative to chassis. |
| Overload protection                             | Output turns off automatically when an overload is applied. Instrument will tolerate a short circuit to ground indefinitely.  |
| Amplitude                                       |   |
| Range <sup>9</sup>                              | 1 mVpp to 10 Vpp into 50 $\Omega$ , 4-digit resolution<br>2 mVpp to 20 Vpp into open circuit, 4-digit resolution  |
| Units   | Vpp, Vrms, or dBm   |
| Accuracy (at 1 kHz) (spec) <sup>3</sup>         | $\pm$ (1% of setting in Vpp) $\pm$ (1 mVpp)   |
| Voltage limit function                          | User-definable maximum and minimum voltage limits   |
| DC offset                                       |   |
| Range   | $\pm$ (5 VDC - Peak AC) into 50 $\Omega$ , 4-digit resolution<br>$\pm$ (10 VDC - Peak AC) into open circuit, 4-digit resolution   |
| Accuracy (spec) <sup>3</sup>                    | $\pm$ (1% of Offset setting) $\pm$ (0.25% of amplitude in Vpp) $\pm$ (2 mV)   |
| Frequency accuracy (spec)                       |   |
| Standard frequency reference                    |   |
| 1 year, 18 to 28 °C                             | $\pm$ (1 ppm of setting + 15 pHz)   |
| 1 year, 0 to 55 °C                              | $\pm$ (2 ppm of setting + 15 pHz)   |
| High-stability frequency reference (Option OCX) |   |
| 1 year, 0 to 55 °C                              | $\pm$ (0.1 ppm of setting + 15 pHz)   |

### Modulation, burst, and sweep characteristics

| <b>Amplitude modulation (AM)</b>                          |  |
|---|--|
| Source  | Internal or external (all models), or other channel (33612A/22A only)  |
| Type  | Full-Carrier or Double-Sideband Suppressed-Carrier (DSSC)  |
| Depth <sup>11</sup>                                       | 0% to 120%, 0.01% resolution   |
| <b>Frequency modulation (FM) <sup>12</sup></b>            |  |
| Source  | Internal or external (all models), or other channel (33612A/22A only)  |
| Deviation   | 1 $\mu$ Hz to 40 MHz (33611A/12A) or 60 MHz (33621A/22A), 1- $\mu$ Hz resolution   |
| <b>Phase modulation (PM)</b>                              |  |
| Source  | Internal or external (all models), or other channel (33612A/22A only)  |
| Deviation   | 0° to 360°, 0.1° resolution  |
| <b>Frequency-shift key modulation (FSK) <sup>12</sup></b> |  |
| Source  | Internal timer or rear-panel connector   |
| Mark & space  | Any frequency within the carrier signal's range  |
| Rate  | $\leq$ 1 MHz   |
| <b>Binary phase-shift key modulation (BPSK)</b>           |  |
| Source  | Internal timer or rear-panel connector   |
| Phase shift   | 0° to 360°, 0.1° resolution  |
| Rate  | $\leq$ 1 MHz   |
| <b>Pulse-width modulation (PWM)</b>                       |  |
| Source  | Internal or external (all models), or other channel (33612A/22A only)  |
| Deviation <sup>6</sup>                                    | 0% to 100% of pulse width, 0.01% resolution  |
| <b>Additive modulation (Sum)</b>                          |  |
| Source  | Internal or external (all models), or other channel (33612A/22A only)  |
| Ratio <sup>11</sup>                                       | 0% to 100% of carrier amplitude, 0.01% resolution  |
| <b>Burst characteristics <sup>10</sup></b>                |  |
| Type  | Counted or gated   |
| Counted burst operation                                   | Each trigger event causes the instrument to produce from 1 to 10 <sup>8</sup> or an "infinite" number of waveform cycles.  |
| Gated burst operation                                     | Instrument produces waveforms while the trigger is in the "on" state. For Gaussian Noise, waveform generation stops immediately when the trigger is in the "off" state. All other waveforms stop at the completion of a cycle; more than one cycle might elapse before generation stops. |
| Start/stop phase  | -360° to +360°, 0.1° resolution  |
| Trigger source  | Internal timer or rear-panel connector   |
| Marker  | Indicated by the trailing edge of the Sync pulse; adjustable to any cycle of the burst.  |

## Specifications (continued)

### Modulation, burst, and sweep characteristics, continued

| <b>Sweep characteristics<sup>12</sup></b>             |  |
|---|--|
| Type  | Linear, Logarithmic, or List (up to 128 user-defined frequencies)  |
| Operation   | Linear and Logarithmic sweeps are characterized by a Sweep time (during which the frequency changes smoothly from Start to Stop), a Hold time (during which the frequency stays at the Stop frequency), and a Return time (during which the frequency changes smoothly from Stop to Start). Returns are always linear. |
| Direction   | Up (start < stop) or Down (start > stop)   |
| <b>Sweep time</b>                                     |  |
| Linear  | 1 ms to 3600 s, 1-ms resolution; 3601 s to 250,000 s, 1-s resolution   |
| Logarithmic   | 1 ms to 500 s, 1-ms resolution   |
| Hold time   | 0 to 3600 s, 1-ms resolution   |
| Return time   | 0 to 3600 s, 1-ms resolution   |
| Trigger source <sup>14</sup>                          | Immediate (continuous), external (rear-panel connector), manual (front-panel button), bus, or Internal timer   |
| Marker  | Indicated by the trailing edge of the Sync pulse; adjustable to any frequency between Start and Stop for Linear and Logarithmic types or any frequency in the list for List type.  |
| <b>Internal timer for FSK, BPSK, burst, and sweep</b> |  |
| Range   | 1 $\mu$ s to 4000 s, 4-ns resolution   |

### Two-channel characteristics (33612A/22A only)

| <b>Standard</b>                                      |   |
|--|---|
| Operating modes                                      | Independent, Coupled parameter(s), Combined (Ch 1 + Ch 2), Equal (Ch 1 = Ch 2), or Differential (Ch 1 = -Ch 2)  |
| Parameter coupling                                   | None, Frequency (ratio or difference) and/or Amplitude and DC offset  |
| Relative Phase                                       | 0° to 360°, 0.1° resolution   |
| Channel-to-channel skew (typ)                        | < 100 ps (both channels configured identically)   |
| Crosstalk (typ)                                      | < -85 dB  |
| <b>IQ Player (Option IQP)</b>                        |   |
| Operation  | This option enables a two-channel model with arbitrary waveform capability to function as a baseband IQ (quadrature modulation) source. Programmable impairments include amplitude imbalance, DC offset difference, and channel-to-channel time skew. |
| Channel-to-channel amplitude imbalance <sup>11</sup> | -30% to +30%, 0.001% resolution   |
| Channel-to-channel DC offset difference              | $\pm$ (5 VDC - Peak AC), 0.1-mV resolution into 50 $\Omega$<br>$\pm$ (10 VDC - Peak AC), 0.2-resolution into open circuit   |
| Channel-to-channel time skew                         | -1 to +1 ns, 10-ps resolution   |
| Display views  | Voltage-vs-Time or Constellation (Ch 1-vs-Ch 2)   |

### Sync/marker output

|                           |  |
|---------------------------|--|
| Connector                 | Front-panel BNC, shell and pin isolated from chassis ( $\pm$ 42 V maximum) |
| Functions                 | Sync, Sweep Marker, Burst Marker, Arbitrary Waveform Marker, or Off        |
| Assignment                | Channel 1 or Channel 2   |
| Polarity                  | Normal or Inverted   |
| Output level (nom)        | 0 to +1.5 V into 50 $\Omega$ ; 0 to +3.0 V into high impedance             |
| Output impedance (nom)    | 50 $\Omega$  |
| Minimum pulse width (nom) | 5 ns   |

## Specifications (continued)

### Modulation input

|                         |   |
|-------------------------|---|
| Connector               | Rear-panel BNC, shell and pin isolated from chassis ( $\pm 42$ V maximum) |
| Assignment              | Channel 1, Channel 2, or both   |
| Voltage level (nom)     | $\pm 1$ V or $\pm 5$ V full scale, selectable                             |
| Input Impedance (nom)   | 5 k $\Omega$  |
| Bandwidth (-3 dB) (typ) | 0 Hz to 100 kHz   |

### External trigger/gate input/output

| General characteristics     |   |
|-----------------------------|---|
| Connector                   | Rear-panel BNC, chassis-referenced (functions as Input or Output) |
| Assignment: Input           | Channel 1, Channel 2, or both                                     |
| Output                      | Channel 1 or Channel 2  |
| Polarity                    | Positive or Negative slope  |
| Maximum Rate                | 1 MHz   |
| Input characteristics       |   |
| Threshold voltage (nom)     | (Output Level setting)/2  |
| Impedance (nom)             | 10 k $\Omega$ , DC-coupled  |
| Minimum pulse width         | 100 ns  |
| Variable Trigger Delay      | 0 to 1000 ns, 1-ns resolution                                     |
| Latency (typ) <sup>15</sup> | < 140 ns  |
| Jitter (typ)                | < 320 ps, rms   |
| Output characteristics      |   |
| Output voltage (nom)        |   |
| Low level                   | 0 V   |
| High level                  | 0.9 V to 3.8 V into high impedance, 0.1-V resolution              |
| Impedance (nom)             | 50 $\Omega$   |
| Duty cycle (nom)            | 50%   |
| Fan-out                     | Up to four Keysight 33600A Series waveform generators             |

### External frequency reference input/output

| Input characteristics     |   |
|---------------------------|---|
| Connector                 | Rear-panel BNC, shell and pin isolated from chassis and all other connectors ( $\pm 42$ V max.) |
| Frequency range: Standard | 10 MHz $\pm$ 20 Hz  |
| Option OCX                | 10 MHz $\pm$ 1 Hz   |
| Voltage                   | 200 mVpp to 5 Vpp   |
| Impedance                 | 1 k $\Omega$    20 pF, AC-coupled   |
| Lock time (typ)           | < 2 s   |
| Output characteristics    |   |
| Connector                 | Rear-panel BNC, chassis-referenced  |
| Frequency (nom)           | 10 MHz  |
| Level (nom)               | 0 dBm (632 mVpp) into 50 $\Omega$   |
| Impedance (nom)           | 50 $\Omega$   |

## Specifications (continued)

### Programming times

| Configuration changes (meas)                   | LAN (socket) | LAN (VXI-11) | USB 2.0 | GPIO    |
|--|--------------|--------------|---------|---------|
| Change function (meas)                         | 29.2 ms      | 29.7 ms      | 29.4 ms | 29.2 ms |
| Change frequency (meas)                        | 2.7 ms       | 3.3 ms       | 2.8 ms  | 2.7 ms  |
| Change amplitude (meas)                        | 8.3 ms       | 9.0 ms       | 8.3 ms  | 8.3 ms  |
| Select Arb. waveform<br>(16 k samples)(meas)   | 12.7 ms      | 13.9 ms      | 13.1 ms | 12.6 ms |
| <b>Arbitrary waveform download to volatile</b> |              |              |         |         |
| 4 K samples (binary transfer)<br>(meas)        | 6.4 ms       | 13.2 ms      | 6.6 ms  | 52.3 ms |
| 1 M samples (binary transfer)<br>(meas)        | 1.26 s       | 2.40 s       | 1.25 s  | 12.3 s  |

### Memory

| <b>Arbitrary waveform</b> |   |
|---------------------------|---|
| Volatile                  | 4 MSa/channel (64 MSa/channel with Option MEM). 512 sequence steps per channel                              |
| Non-volatile              | 970 MB in file system (~485 MSa of arbitrary waveform records)  |
| <b>Instrument state</b>   |   |
| Store/recall              | User-defined instrument states with user-defined names in file system                                       |
| Power-On state            | Default settings or state at power-off, selectable  |
| <b>USB file system</b>    |   |
| Front-panel port          | USB 2.0 high-speed mass storage class (MSC) device  |
| Capability                | Read or write instrument configuration settings, instrument states, arbitrary-waveform, and sequence files. |
| Speed (nom)               | 10 MB/s   |

### General characteristics

| <b>Computer interfaces</b>       |  |

## Specifications (continued)

### General characteristics (continued)

| <b>Environmental</b>                        |   |
|---|---|
| Storage temperature                         | -40 to 70 °C  |
| Warm-up time                                | 1 hour  |
| Operating environment                       | EN61010, pollution degree 2, indoor locations       |
| Operating temperature                       | 0 to 55 °C  |
| Operating humidity                          | 5% to 80% RH, non-condensing                        |
| Operating altitude                          | < 3000 meters                                       |
| <b>Regulatory</b>                           |   |
| Refer to the Declaration of Conformity      |   |
| Sound pressure level (1-m free-field) (nom) | 35 dB(A) at $T_{\text{AMBIENT}} \leq 28 \text{ °C}$ |
| <b>Line power</b>                           |   |
| Line voltage                                | 100 to 240 V, 50/60 Hz<br>100 to 120 V, 400 Hz      |
| Power consumption                           | 75 W, 150 VA  |
| <b>Warranty</b>                             |   |
| Standard                                    | 3 years   |

#### FOOTNOTES

1. Applies to 120-MHz models (33621A/22A) only.
2. DC Offset set to zero.
3. Add 1/10 of the specification per °C for operation at temperatures below 18 °C or above 28 °C.
4. At low amplitude, non-harmonic spurious level is -100 dBm (typ).
5. Measured with a Keysight E5052B signal source analyzer. Phase noise improves by 20 dB/decade as output frequency is decreased.
6. Subject to pulse width limits.
7. Measured with a Keysight E5052B signal source analyzer.
8. Maximum sample rate with Filter "Off" is 160 MSa/s for 80-MHz models and 250 MSa/s for 120-MHz models.
9. Maximum amplitude is less at high frequency for certain waveforms.
10. Counted burst is not available for Gaussian Noise.
11. Subject to amplitude limits.
12. All frequency changes are phase-continuous.
13. External trigger only for sweep time > 8000 s.
14. Measured with a Square or Pulse waveform, edge time set to minimum, and trigger delay set to zero. Trigger latency is generally greater for other instrument settings. For some waveforms, trigger latency is a function of output frequency.

## Definitions

### Specification (spec)

The warranted performance of a calibrated instrument that has been stored for a minimum of 2 hours within the operating temperature range of 0 to 55 °C and after a 1-hour warm up period. All specifications account for the effects of measurement and calibration-source uncertainties, and were created in compliance with ISO-17025 methods. Data published in this document are specifications (spec) only where specifically indicated.

### Typical (typ)

The characteristic performance that 80% or more of manufactured instruments will meet. This data is not warranted, does not include measurement or calibration-source uncertainty, and is valid only at room temperature (approximately 23 °C).

### Nominal (nom)

The mean or average characteristic performance, or the value of an attribute that is determined by design such as a connector type, physical dimension, or operating speed. This data is not warranted and is measured at room temperature (approximately 23 °C).

### Measured (meas)

An attribute measured during product development for the purpose of communicating expected performance. This data is not warranted and is measured at room temperature (approximately 23 °C).
